Waves Dugan Automixer
for Waves MultiRack

Developed in association with renowned pro audio inventor Dan Dugan, the **WAVES DUGAN AUTOMIXER** is a groundbreaking software version of the popular Dugan Speech System Automatic Mixing Controllers used the world over.

Incorporating Dugan's proprietary voice-activated process, the Waves Dugan Automixer plugin automatically controls the gains of multiple microphones in real time, dramatically reducing feedback, studio noise and comb filtering from adjacent microphones. It maintains a consistent system gain, even when multiple speakers are talking simultaneously, and makes perfectly matched crossfades, without any signal compression, and without a noise gate that may cause unwanted sonic artifacts.

Available for virtually any console, the Dugan Automixer is the ultimate solution for broadcast news panels, talk shows, houses of worship, film and television dialog recording, and any other discussion panel or conference scenario involving multiple microphones and participants.

Compatible with MultiRack Native and MultiRack SoundGrid® only

APPLICATIONS

Conference reinforcement, video trucks

TV news and sports panels

Reality shows, game shows

Wireless mics for theater

Boardrooms, civic meeting rooms

Teleconferencing and distance learning

Houses of worship

BENEFITS

Eliminates late upcuts

Reduces studio noise

Reduces reverberation

Reduces PA feedback

Reduces comb filtering from adjacent mics

CAPABILITIES

Add automixing to almost any console

Automix up to 64 channels simultaneously

Partition channels into one to three groups

Bypass or mute individual channels

One-button override to mute all but one mic

Meter channel gains, input levels or output levels
